

▶ ErgoSteer

Steering Assistance System for tractors and self-propelled agricultural machinery

EASY AND COMFORTABLE STEERING AND TURNING

ErgoSteer supports the driver during all operations that require intensive steering. Especially during repeating turning manoeuvres in the farmyard or headland turns arms and shoulders are being substantially relieved.

SIMPLE

ErgoSteer consists of a joystick, a controller box and an electric motor.

The motor is attached to the steering column with a swivel bracket. Each move of the joystick actuates the electric motor which turns the steering wheel.

FLEXIBLE

The system can easily be swapped between vehicles. Brackets for over 600 vehicles are available off the shelf.

GENTLE

Driving straight is difficult but not exhausting. During repeating turning manoeuvres in the farmyard or headland turns arms and shoulders are heavily strained. ErgoSteer relieves muscles, skeleton and joints during operations requiring intensive steering. Changing the driving direction with ErgoSteer is both precise and a relief for arms and shoulders.

UPGRADABLE

ErgoSteer can be fully integrated with the automatic steering assistance system EZ-Steer. The button on the joystick will automatically engage or disengage the GPS based steering system on the headlands.

YOUR ADVANTAGES AT A GLANCE

- ▶ SIMPLE INSTALLATION, EASY TO MOVE BETWEEN VEHICLES
- ▶ RELIEVES MUSCLES, SKELETON AND JOINTS
- ▶ UPGRADE TO GPS-BASED STEERING OPTIONAL
